New releases

Summary of releases since last user group meeting (17.10.2018)

- Release overview always available here :
https://github.com/openoereb/pyramid_oereb/releases
- Migration notes here :
https://openoereb.github.io/pyramid_oereb/doc/changes.html

- **V1.3.0** (Jan 3rd, 2019)
 - Import facility for federal data (new database column)

- **V1.3.1** (Feb 1st, 2019)
 - Oereblex model implementations now included
 - Official theme translations now included in standard configuration
 - Srid fix (for script usage)

New releases

- **V1.4.0** (Feb 25th, 2019)
 - More properties now implemented as multilingual (map.legend_at_web, sub_theme) → changes in DB and standard models
- **V1.4.1** (Mar 5th, 2019)
 - Bug-fix for bundled oereflex models
- **V1.4.2** (Mar 11th, 2019)
 - Maintenance release to avoid pyproj library error
- **V1.4.3** (Mar 29th, 2019)
 - Fix import script functionality (compatibility with Srid fix from V1.3.1)

Our recommendation : upgrade to 1.4.3

! using upgrades

- Reconsider usage of custom models : still necessary ?
 - Note for oereblex : oereblex models are now already included, and maintained by the project.
- Regenerate code for custom models from templates, check differences
- Check any differences between your configuration and newest standard configuration → try to standardize
- Consider regenerating database from scripts
- For federal themes, use import functionality (already included → maintained by the project) – avoids custom implementation
