# New development

## Summary of new features since last user group meeting (14.05.2019)

*Reminder :*

- *Release overview always available here :*  
[https://github.com/openoereb/pyramid\\_oereb/releases](https://github.com/openoereb/pyramid_oereb/releases)
- *Migration notes here :*  
[https://openoereb.github.io/pyramid\\_oereb/doc/changes.html](https://openoereb.github.io/pyramid_oereb/doc/changes.html)

# Feature overview, from V1.5.0 to V1.7.3

- **V1.5.0** (May 28th, 2019)
  - PDF extract generation (with MapFish Print) improvements : PDF/A conformance, and new configuration options for customization
- **V1.5.1** (Aug 6th, 2019)
  - XML2PDF service integrated
- **V1.6.0** (Jan 22nd, 2020)
  - Full multilingual support
  - Faster extract generation
  - Sorting and grouping : new options
  - PDF archive functionality

# Feature overview, from V1.5.0 to V1.7.3

- **V1.7.0** (Jan 31st, 2020)
  - Oereblex : improved performance
  - New statistics functionality (counting usage)
- **V1.7.3** (Mar 16th, 2020)
  - Oereblex : new schema and attribute (version 1.2.0)
  - PDF generation with MapFish Print : improve performance

Our recommendation : upgrade to 1.7.3

# Reminder : Easing upgrades

- Reconsider usage of custom models : still necessary ?
  - Note for oereblex : oereblex models are now already included, and maintained by the project.
- Regenerate code for custom models from templates, check differences
- Check any differences between your configuration and newest standard configuration → try to standardize
- Consider regenerating database from scripts
- For federal themes, use import functionality (already included → maintained by the project) – avoids custom implementation
